Linear Map: Iteration with a Parameter

40

$a = -1.00$
 $Y_0 = 50$

$$Y_{i+1} = a \cdot Y_i$$

Linear Map: Iteration with a Parameter

$$Y_{i+1} = a \cdot Y_i$$

Linear Map: Iteration with a Parameter

Some interesting differences compared to a linear model:

- Change of behaviour over iterations
 - ▶ *Simple model vs. “time” or “occasion” as a predictor*
- Qualitatively different behaviour
 - ▶ *One model produces at least four different types of behaviour*
 - ▶ *Not by adding predictors (components), by changing one parameter*
