

Bifurcation Diagram - Phase Diagram

A graphical representation of the possible states a dynamical system can end up in for different values of one or more parameters.

49

• The parameter is called the *control parameter*.

These are *attractors*.

- The change from one attractor (or set) to another is called a *bifurcation*.

Bifurcation Diagram - Phase Diagram

A graphical representation of the possible states a dynamical system can end up in for different values of one or more parameters.

- The parameter is called the **control parameter**.
- The end states are called **attractors**.
- The change from one attractor (or set) to another is called a **bifurcation**.

End states are attractors in state space: Attractor types

State Space is an abstract space used to represent the behaviour of a system. Its dimensions are the variables of the system. Thus a point in the phase space defines a potential state of the system. The points actually achieved by a system depend on its iterative function and initial condition (starting point).
