

Radboud University Nijmegen

- **Iterative processes** - (coupled) difference / differential equations that represent autocatalytic change processes, the time-evolution of a system observable

• **Time series** - a record of values generated by an iterative / changing process

- **Solution** - if available, actual iterations of the function are not necessary. Only available for a very limited set of (coupled) equations.

**Story so far - Assignments session 1:**

**Different ways to represent characteristics of change processes**

# Story so far - Assignments session 1:

## Different ways to represent characteristics of change processes
